

Revolabs Enhances HD Control Panel to Include New Professional and Installed Audio Features

HD Gold Control Panel Included with Service Plans

Boston, MA (March 9, 2010) – Revolabs, Inc., a leading provider of wireless microphone systems, today announced the HD Gold Control Panel Windows®-based software. The HD Gold version of the software provides access to monitor and control the networked Executive HD Systems and HD Wireless Microphones from a single PC software program with graphical user interface. The enhanced HD Gold Control Panel is a software upgrade included with the Revolabs Gold and Silver Service Plans or it can be purchased separately.

The HD Gold Control Panel includes enhanced functionality for both the professional audio market and the installed audio/visual market. The ability to control the mute status and gain of each microphone, and lock out presenters from using the mute button are all features that make it easy for the AV technician to orchestrate a successful presentation. Easier integration with the leading control systems, e.g. AMX and Crestron, is welcomed by audio technicians who design large AV installations. The HD Gold Control Panel also provides the ability to closely monitor the real-time state of each microphone, including whether the HD Wireless Microphone has been taken out of range, as a theft deterrent.

“Because the audio quality of our HD Wireless Microphones is on par with wired microphones, they are now ideal for almost any application. The HD Gold Control Panel incorporates features for diverse applications, such as microphones installed in a large conference center to rental microphones configured in various ways within a hotel meeting room,” stated Gregory Shalov, Vice President of Global Sales, Revolabs. “The HD Gold Control Panel was designed to make it just as easy for any AV or IT specialist to monitor and control the Revolabs HD Wireless Microphone System as a wired one.”

About Revolabs

Revolabs, Inc. manufactures Wireless Microphone Systems used throughout the world and across a wide range of applications including conferencing, recording, podcasting, webcasting, broadcasting, as well as many industries such as financial services, education, medical, legal and houses of worship. Revolabs' newest product line, HD Wireless Microphone Systems, provide superior audio performance for video- and audio- conference calls, recording, broadcasting, public address systems, and other collaboration applications. All of the Revolabs products facilitate natural mobility by allowing participants to move about a workspace with no wires to worry about. The Revolabs Wireless Microphones which are available in wearable, tabletop, XLR adapter and the latest Countryman adapter form-factors, are wireless, secure (encrypted), rechargeable, and flexible, and GSM-impervious. The company is headquartered in Maynard, Mass., USA, and can be reached at 800.326.1088 or on the web at www.revolabs.com.
